# 1. Introduction

This document's purpose is to give helpful information on how to integrate with REST APIs, it also includes creating a user via automatically with given parameters.

- The sample REST API was provided by the client and was used to send SMS with given data
- IBM Sterling B2B Integrator, IBM Sterling File Gateway are products of IBM which are used for file-based-integration middleware which have adapters FTP/SFTP/FTPS/C:D etc. and have capabilities of business processes developed by BPML. Used version is 5.2.4

### 3-Business Process implemented

Shared at the end as addendum 1

### 4-User creation Business Process uses this Partner Template

Shared at the end as addendum 2

### 5-Security Context is needed for User creation

Shared at the document below

## 2. Business Process Implementation on Sterling B2B Integrator / File Gateway

This is a sample business process which creates a user at B2B Integrator and sends the password data to the given cellphone number. By this the user onboarding could be automated and the IT operations will not know what is the password for the user in the future.

### Input file to get parameters from:

This is a sample input file content which has data to create the user (testpartner.xml)

```
<Bank>
  <Partner>
    <Name>User12345</Name> ->user to create
    <Phone>05301234567</Phone> ->the cellphone to send the password
    <Email>user1@si.com</Email>
  </Partner>
</Bank>
```

For the sample provided, security context must be created, it is created just once for the B2B Integrator, the sample I created was:

***install\_dir\bin>securityContext.cmd set Mehmet Partner password***

UNIX: *install\_dir/bin>securityContext.sh set context identity passphrase*

Windows: *install\_dir\bin>securityContext.cmd set context identity passphrase*

Returns the following message: Context saved.

More info:

[http://www.ibm.com/support/knowledgecenter/SS3JSW\\_5.2.0/com.ibm.help.svcs\\_adpts\\_a\\_l.doc/Import\\_svc.html](http://www.ibm.com/support/knowledgecenter/SS3JSW_5.2.0/com.ibm.help.svcs_adpts_a_l.doc/Import_svc.html)

Used as at the BPML:

```
<assign to="Context">Mehmet</assign>
<assign to="Identity">Partner</assign>
<assign to="Passphrase">password</assign>
```

This BPML part gets the input file content, parses it and sets the values to variables:

```
<operation name="XML Encoder">
  <participant name="XMLEncoder"/>
  <output message="XMLEncoderTypeInputMessage">
    <assign to="." from="*"></assign>
    <assign to="exhaust_input">YES</assign>
    <assign to="mode">xml_to_process_data</assign>
    <assign to="output_to_process_data">YES</assign>
  </output>
  <input message="inmsg">
    <assign to="." from="*"></assign>
  </input>
</operation>

<assign to="username" from="//Partner/Name/text()"></assign>
<assign to="folder" from="//Partner/Name/text()"></assign>
<assign to="phone" from="//Partner/Phone/text()"></assign>
<assign to="email" from="//Partner/Email/text()"></assign>
<operation name="File System Adapter">
  <participant name="CLIENTNAME_FSA"/>
  <output message="FileSystemInputMessage">
    <assign to="." from="*"></assign>
    <assign to="Action">FS_COLLECT</assign>
    <assign to="deleteAfterCollect">>false</assign>
  </output>
  <input message="inmsg">
    <assign to="." from="*"></assign>
  </input>
</operation>

<operation name="getBPMetaDataInfo">
  <participant name="BPMetaDataInfoService"/>
  <output message="Xout">
    <assign to="DISPOSITION">>false</assign>
    <assign to="." from="*"></assign>
  </output>
  <input message="inmsg">
    <assign to="." from="*"></assign>
  </input>
</operation>

<assign to="WFID" from="/ProcessData/BPDATA/WORKFLOW_ID/text()"></assign>
<operation name="Document Keyword Replace">
  <participant name="DocumentKeywordReplace"/>
  <output message="DocKeywordReplaceInputMessage">
    <assign to="." from="*"></assign>
    <assign to="literal_mode">>true</assign>
    <assign to="keyword1">$$username$$</assign>
    <assign to="replace1" from="/ProcessData/username/text()"></assign>
    <assign to="keyword2">$$usermailbox$$</assign>
    <assign to="replace2" from="/ProcessData/folder/text()"></assign>
    <assign to="keyword3">$$userguid$$</assign>
    <assign to="replace3" from="/ProcessData/BPDATA/WORKFLOW_ID/text()"></assign>
    <assign to="keyword4">$$phonenumber$$</assign>
    <assign to="replace4" from="/ProcessData/phone/text()"></assign>
    <assign to="keyword5">$$emailaddress$$</assign>
    <assign to="replace5" from="/ProcessData/Email/text()"></assign>
  </output>
  <input message="inmsg">
    <assign to="." from="*"></assign>
  </input>
</operation>
```

The url given by the client was like this:

`http://URLOFTHECLIENT/API/GET/SMS?UserName=&Password=&JobId=1819a7b9-f829-45d1-8dcf-a35b00a8a428&Message=SMSMESSAGETOSEND&MobilePhone=CELLPHONENUMBER`

Success sample response :

`3021477;SUCCESSFUL. MESSAGE HAS BEEN QUEUED WITH HIGH PRIORIY`

This part of the BPML begins a HTTP session and uses HTTP GET to call the REST API which does the SMS sending and ends the created HTTP session.

```
<sequence name="SequenceHttpStart">

    <assign to="url"
from="concat ('http://URLOFTHECLIENT/API/GET/SMS?UserName=
&Password=&JobId=1819a7b9-f829-45d1-8dcf-

  </operation>
</onFault>
</sequence>

```

**Sample business process instance sends the username and password as SMS to given cellphone:**

The screenshot displays the IBM Sterling B2B Integrator Dashboard in a Windows Internet Explorer browser. The dashboard shows the 'Business Process Detail' for the process 'HalkBank Onboarding'. The process instance is identified by ID 139979, is in a 'Success' status, and is completed by user 'fg\_sysadmin'. The dashboard includes a table of process steps, a left-hand navigation menu, and a right-hand sidebar with additional information.

**Business Process Detail**
